## We claim:

- 1. An array composition comprising:
- (a) a rigid support;
- 5 (b) a molded layer with at least a first assay location comprising discrete sites, wherein said molded layer is adhered to said rigid support;
  - (c) a layer of bonding agent adhering said rigid support to said molded layer; and
  - (d) a population of microspheres comprising at least a first and a second subpopulation, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent wherein said microspheres are randomly distributed on said sites.
  - 2. An array composition according to claim 1, wherein said sites are separated by a distance of at least about 5  $\mu$ m.
  - 3. An array composition according to claim 1, wherein said sites are separated by a distance of at most about 100  $\mu m$ .
  - 4. An array composition according to claim 1, wherein said rigid support is formatted to the dimensions of a microscope slide.
  - 5. An array composition according to claim 1, wherein said molded layer comprises at least a second assay location comprising discrete sites.
  - 6. An array composition according to claim 5, wherein said first and second assay locations are separated by a fluid barrier.
  - 7. An array composition according to claim 6, wherein said fluid barrier is a physical fluid barrier.
  - An array composition according to claim 7, wherein said physical fluid barrier comprises a material that is added to said molded layer.
    - 9. An array composition according to claim 8, wherein said molded layer comprises said physical fluid barrier.
- 10. An array composition according to claim 6, wherein said fluid barrier comprises a physicochemical surface coating.
  - 11. An array composition according to claim 1, wherein said first and second bioactive agents comprise nucleic acids.

- 12. An array composition according to claim 1, wherein said first and second bioactive agents comprise proteins.
- 13. An apparatus comprising:
- (a) a detection instrument; and
  - (b) the array composition according to claim 1, wherein said composition is in said instrument.
  - 14. A method of detecting a target analyte using the apparatus of claim 13, comprising the steps of:
  - (a) contacting said array composition with a sample containing said target analyte; and
- (b) detecting said target analyte using said detection instrument.
  - 15. A method for making an array composition containing at least a first assay location having discrete sites comprising the steps of:
  - (a) contacting a surface of a template structure, said surface comprising one or more sets of projections, with a moldable material;
  - (b) removing said moldable material from said surface of said template structure, whereby said removed moldable material forms a molded layer with at least a first assay location comprising discrete sites;
  - (c) adhering said molded layer to a rigid support; and
  - (d) randomly distributing microspheres on said molded layer such that individual discrete sites comprise microspheres, wherein said microspheres comprise at least a first and a second subpopulation, wherein said first subpopulation comprises a first bioactive agent and said second subpopulation comprises a second bioactive agent.
- 16. The method according to claim 15, wherein the projections in said one or more sets of projections are separated by a distance of at least about 5 μm.
  - 17. The method according to claim 15, wherein the projections in said one or more sets of projections are separated by a distance of at most about 100  $\mu$ m.
  - 18. The method according to claim 15, wherein said template structure is cylindrical, and steps (a) and (b) are carried out by a continuous process of rolling said cylindrical template structure.
  - 19. The method according to claim 15, wherein said molded layer is flexible.
  - 20. The method according to claim 19, wherein said flexible molded layer is stored in rolled form.
  - 21. The method according to claim 15, wherein said molded layer comprises at least a second assay location comprising discrete sites.

5

- 22. The method according to claim 21, wherein said first and second assay locations are separated by a fluid barrier.
- 23. The method according to claim 21, further comprising the step of adding a fluid barrier to said molded layer, which fluid barrier separates said first and second assay locations.
- 24. The method according to claim 15, wherein said rigid support is formatted to at least one dimension of a microscope slide.
- 25. The method according to claim 15, further comprising a step of applying a releasing agent to said surface of said template structure prior to said contacting step.
  - 26. The method according to claim 15, further comprising the step of coating the back surface of said molded layer with an adhering agent.
